My first flowcharts

A flowchart is a diagram that represents the flow of a program during the process. Doing the step by step process on a program is what I am not curious about until I learned flowchart. We started by doing a flowchart by adding two numbers. It is a simple addition which should be the easiest to do but since I lack experience in making flowchart it is hard enough to do it on my own. I do not know much about making flowcharts so I can say that it is the first hurdle that I have in class. I think the learning flowchart will be valuable to me in the future because of its potential possibilities to help me in my chosen career path.

In conclusion, a flowchart is a new experience for me which makes it exciting and stressful. Exciting because if I mastered it, I will learn a new skill that I can bring till the near future. Stressful because I find it a bit difficult for myself but what is life without a little challenge
